ABSTRACT

The Case Western Reserve University, School of Library Science bibliography has been revised to restrict its contents to current items, except where older documents are listed to preserve a series. The listings are broken up into six sections: (1) basic research in information science, (2) experimentation, (3) professional applications, (4) interdisciplinary aspects of information science, (5) education in librarianship and information science and (6) general. F O R E W O R D

I would point first of all to two publications issued through The Press of Case Western Reserve University: Information Retrieval Thesaurus of Education Terms and Schistosomiasis: A Bibliography. And also to the three major volumes of the Final Report for our long-term NIH-sponsored Comparative Systems Laboratory. In echt library parlance, the last-named is long overdue; this does not I think detract from its interest to the field, nor impugn in the least the energy, talent or perseverance of the manager of the project, Tefko Saracevic.

It is ironic that this Foreword must to some degree be an apology for the lag between activity--research, instructional innovation, applications of new technology--and the appearance of published reports of that activity. Ironic because, of all places, the Center for Documentation and Communication Research is most committed by its charter and program to expediting the transfer of information. Not that Center personnel have been unproductive this year: a glance at this Bibliography will reveal a number of significant additions. Professors Goffman, Rees and Saracevic have produced particularly interesting contributions. The point made above, however, is mainly an expression of regret that more has not yet appeared on some of our other important work. For example, Case Western Reserve University is becoming increasingly

involved, in many ways, with the challenging and urgent problems of the City of Cleveland. We at the Documentation Center are studying the role of the library in this milieu--library services, library materials, library manpower, library education. Reports on this work, much of it in the field, are yet to appear. To take another example, the work in medical librarianship which Professor Rees has been directing and which derives directly from the Center's long record of research in medical documentation, has led to involvement with both the Regional Medical Library Program and the Regional Medical Program itself. Reports of this activity too are only foreshadowed in the publications listed here. Or for a third instance, the research reports of the doctoral students under the direction of Dr. Goffman in the problem analysis of library input, work and materials flow, still exist only in manuscript. Perhaps our annual record should include staff and student diaries as well as journal articles and published reports!

In any case it has been an eventful year. As the library moves from the Computer Revolution into the Social Revolution, so do the work and the orientation of the Center for Documentation and Communication Research. As the definition of research in library and information science deepens and becomes more broad, I know that our published record will reflect the change.

A. J. Goldwyn

SPECIAL NOTE

As done in previous years, the Bibliography has been revised in order to restrict its contents to current items, except where older documents are listed to preserve a series. Requests for reprints, where they are available, may be directed to Edward Verhosek, Administrative Assistant of the Center. Stocks of some are limited or exhausted, however, and the fact of listing does not insure availability of any item.

Also address Mr. Verhosek for copies of the following:
